

# Configuring Chassis Ports in the EN-4000

The EN-4000 is the newest member of Encore Networks' family of routers. It provides wireless and cabled connections to a local area network (LAN) and to peripheral devices and remote devices.

Follow the procedures in this discussion to configure the EN-4000.

Also see [Configuring the EN-4000's Serial Ports](#).

## 5.1 Port Interfaces

Confer with your network administrator to get values for this configuration.

- 1 Select the **Network** management area.
- 2 Select the **Interfaces** configuration area.
  - ❖ The EN-4000 Interface Overview Screen is displayed ([Figure 5-1](#)).

Figure 5-1. EN-4000 Interface Overview Screen

- 3 To define a new interface, select **Add New Interface**.
  - ❖ The Screen to Create an Interface is displayed ([Figure 5-2](#)).

Figure 5-2. Screen to Create an Interface

- 4 Fill out the fields on the Screen to Create an Interface.
- 5 Select the **Submit** button (in the lower right corner of the screen) to add the interface.
- 6 Select the **Back to Overview** button (in the lower left corner of the screen) to return to the general network interfaces screen.
  - ❖ The EN-4000 Interface Overview Screen is redisplayed, showing the new interface.

### 5.1.1 Configuring a LAN Port

Confer with your network administrator to get values for this configuration.

- 1 Select the **Network** management area.
- 2 Select the **Interfaces** configuration area.
  - ❖ The EN-4000 Interface Overview Screen is displayed (Figure 5-3).

Figure 5-3. EN-4000 Interface Overview Screen

- 3 Select the **Edit** button in the **LAN** interface row.
- 4 If necessary, select the **General Setup** tab.
  - ❖ The LAN Interface General Setup Screen is displayed (Figure 5-4).

Figure 5-4. LAN Interface General Setup Screen

The screenshot displays the 'LAN Interface General Setup Screen' in the Encore Networks management interface. The interface includes a navigation menu with 'Network' selected, and a sub-menu with 'LAN' selected. The main content area is titled 'Interfaces - LAN' and contains a 'Common Configuration' section with tabs for 'General Setup', 'Advanced Settings', 'Physical Settings', and 'Firewall Settings'. The 'General Setup' tab is active, showing fields for 'Protocol' (Static address), 'IPv4 address' (192.168.1.1), 'IPv4 netmask' (255.255.255.0), 'IPv4 gateway', 'IPv4 broadcast', 'Use custom DNS servers', 'Accept router advertisements', 'Send router solicitations' (checked), 'IPv6 address', and 'IPv6 gateway'. Below this is the 'DHCP Server' section with tabs for 'General Setup' and 'Advanced Settings'. The 'General Setup' tab is active, showing fields for 'Ignore interface' (Disable DHCP for this interface), 'Start' (100), 'Limit' (150), and 'Leasetime' (12h). The 'Save & Apply' button is visible at the bottom right.

- 5 After configuring the fields on the screen (including the **General Setup** items under the **DHCP Server** heading in the lower portion of the screen), select the **Save & Apply** button. Then select the **Advanced Settings** tab under the **DHCP Server** heading.
  - ❖ The LAN Interface DHCP Server Advanced Settings Screen is displayed (Figure 5-5).

### Interfaces - LAN

On this page you can configure the network interfaces. You can bridge several interfaces by ticking the "bridge interfaces" field and enter the names of several network interfaces separated by spaces. You can also use VLAN notation INTERFACE.VLANNR (e.g.: eth0.1).

Status

Uptime: 4d 3h 41m 43s  
 MAC-Address: 00:A0:EB:01:F1:30  
 RX: 27.16 MB (162377 Pkts.)  
 TX: 198.76 MB (202929 Pkts.)  
 IPv4: 192.168.1.1/24

br-lan

Protocol: Static address

IPv4 address: 192.168.1.1

IPv4 netmask: 255.255.255.0

IPv4 gateway:

IPv4 broadcast:

Use custom DNS servers:

Accept router advertisements:

Send router solicitations:

IPv6 address:

IPv6 gateway:

**DHCP Server**

General Setup **Advanced Settings**

Dynamic DHCP:  Dynamically allocate DHCP addresses for clients. If disabled, only clients having static leases will be served.

Force:  Force DHCP on this network even if another server is detected.

IPv4-Netmask:  Override the netmask sent to clients. Normally it is calculated from the subnet that is served.

DHCP-Options:  Define additional DHCP options, for example "6,192.168.2.1,192.168.2.2" which advertises different DNS servers to clients.

Reset Save Save & Apply

- 6 After configuring the fields for the **Advanced Settings** tab under the **DHCP Server** heading, select the **Save & Apply** button. Then select the **Advanced Settings** tab under the **Common Configuration** heading (in the top portion of the screen).
  - ❖ The LAN Interface Common Configuration Advanced Settings Screen is displayed (Figure 5-6).
